FASTENERS & TOOLS

Stop Guessing Door Weight!

- Counterbalanced arm is used to find the weight of a door.
- To measure the door weight place the CBA on the scale and then let the door down onto the small tube welded on top of the CBA.
- Release the tension on the springs of the door and read the scale.
- Take that setting and multiply times the factor (written underneath the CBA) to come up with the door weight.

TSSC1\$52.50

Scale not included
